

A PAIR OF CONTRASTING ECLIPSING BINARIES

Some projects involving binary stars were carried out in conjunction with Edwin Budding of the Carter Observatory in Wellington. We did the observing, Budding worked on the theoretical analyses. There were many other EBs involved over the years—RS Columbae, RW Doradus, QZ Carinae, V415 Carinae, V777 Sagittarii, PW Puppis, AB

Doradus, HR 6384, HR 2554/1, HD 104901B, AL Velorum, BY Crucis and TY Pyxidis. Not all the projects were successful as some involved intrinsic variables and we didn't always get enough measures.
